

## Intuitive CMP-1

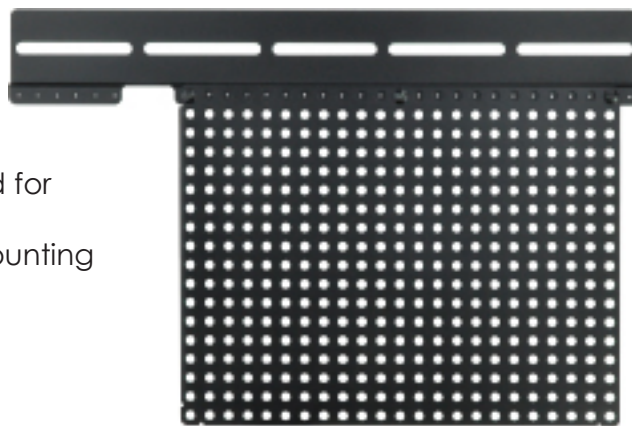

### Component Mounting Plate

One major obstacle that confronts most of today's installers...where to put the components that support the system; the Apple TV, room controllers, sat boxes, etc...many need to be installed at the display location. Our IWB series of In Wall Boxes are a great solution for that issue, but what about the installations where cutting the wall is not possible? Block walls, stand mounts, pole mounts, commercial installations...the CMP-1 solves this issue.

It easily attaches to the rear of the display using the VESA mounting locations, allowing you to quickly and securely add a versatile component location.

Built from powdercoated steel, the CMP-1 will display the quality of your installation and last a lifetime.

- Made from 1.5mm (.06") Thick steel
- Heavy duty black powdercoat finish
- Attaches to VESA patterns from 50 to 400
- Separate VESA mounting plate and breadboard for installation flexibility
- Attach equipment using our UMC-1 universal mounting clamps and finish with our CLP-1 Zip tie clips.
- Huge 11.71" x 9.21" mounting platform
- Increased reliability for all of your installations
