A SOUND INVESTMENT

Aeria Sound Environments turn walls into high-end speakers that saturate any room with rich full sound. Completely invisible, Aeria uses proven Acoucentric® Sound Technology. Its unsurpassed versatility and uniqueness have captured the imaginations of discriminating architects, designers and home owners everywhere.

Aeria Sound Environments can be installed by our trained industry professionals during new construction or anytime as a retrofit.

Our planning specialists can help design home theatre environments that wow you or a lifestyle system that meets your every need.

Imagine the ability to decorate your space the way YOU want and still be able to have music playing, without having to incorporate a stereo or visible speaker into your design. Or the ability to just close your eyes while listening to your favorite song, and to be completely immersed in the warm rich sound with no "hotspot" or uneven volume areas to interrupt your experience.

WHAT OUR CUSTOMERS SAY:

"After my first experience with Aeria Sound Environments, I was sold on the concept. Since then I have remodeled my office using 12 Aeria Acoucentric® modules, had 6 systems installed in custom houses, a complete surround sound home theatre installed in a new show home and will be doing the same in my own home"

Garry Rodgers
Custom Home Builder
Ladysmith, BC

"....for people looking to hear audio and not see it! Acoucentric® modules provide exceptional performance from an unseen source. Within the enclosure of the room, the "sweet spot" has become the room."

Glen McIntosh Audiophile expert Cowichan Valley, BC
